

ABSTRACT

This bachelor thesis named *Awareness of clients of selected K-centre of addiction treatment options* in theoretical part deals with a phenomenon of drug addiction. It describes the definition of pathological addiction, models of dependence, types of drugs and treatment options in the Czech Republic. The research part seeks to answer the research goals and assumptions of respondents of selected K-centre.

The main aim of the research part is to find out specific information about clients of selected K-centre and to explore their drug experiences. Sub-goals tend to identify a socio-demographic data about clients of K-centre and their awareness of treatment options of drug abuse. The last sub-goal tries to find out information about clients drug dependence treatment.

For a data collection was used a structured questionnaire which contained 10 closed or semi-closed questions. The questionnaire survey was carried out within one working week in selected contact centre in Prague. There were collected answers from 24 respondents (16 men and 8 women).

The research survey shows that awareness of clients of selected K-centre of addiction treatment options is very high. It was also found that the majority of respondents is treating or was treated for their addiction dependence (except treatment in K-centre). The most visited specialized centre for addiction dependence was hospital treatment.

Based on the results of research is clear that clients of selected K-centre are well informed about the drug dependence treatment options. Results of research can be also interpreted that the majority of clients was treated for their addiction dependence or they are considering the treatment. The results show that some of respondents were treated repeatedly.
