The Bachelor thesis deals with the Opinion of Auditors and Employees on Inner Audits in Hospital Hradec Králové.

Elementary concepts are defined in the theoretical part of the document. Description of inner audits and advers events report is also included. Anonymous questionnaire inquiry pertaining to inner audits is a core of empirical part of the text. 40 auditors and employees working in the hospital more than 5 years were involved in the investigation. Opinions of auditors were compared to statements of employees. Final version of the questionnaire was refined after analysis of preliminary questionnaire results. Questions pertain to accreditation, education of auditors, topics and timing of audits, surveillance of advers events and negative results notification. Information obtained can assist to improve inner audit system and quality of healthcare in the hospital.
