Title: Aspects of the testicular cancer from the affected patients point of view
Supervisor: MUDr. Jaroslav Pacovský, Ph.D.
Number of pages: 92
Number of attachments: 2
Year of defense: 2016
Keywords: testicular tumors, prevention, nursing care, education

The Bachelor's thesis is focused on the testicular tumors. The main issues are population awareness and this disease prevention options knowledge. This work utilizes personal experiences of men affected with this disease.

Theoretic part describes symptoms, risk factors, diagnostic procedures and therapy of testicular tumors. The main interest of this work is prevention and it offers suitable methods for early diagnosis. The role of a nurse in a nursing process, an optimal communication form and educational activities are designed as well. Possible patient's reactions of patient on the proclaimed severe diagnosis and the disease self-perception are presented.

The empirical part presents results of the quantitative research with the questioners use. The aim of the study was deeper understanding of this diagnosis and to get more complex overview on it. The most important expected result is to create suitable information handout.
