

## **The demographic development of the population in the city of Litoměřice in the years 1700–1799**

### **Abstract**

The aim of Thesis is capturing the development of natural change in city of Litomerice and its suburbs in the 18th century and characterizing the basic demographic indicators. Absolute number of marriages, births and deaths was found by using Name excerpts from parish registers. Based on the aggregate method, the data was classified according to the needs analysis for individual years or decades. The development of natural change of Litoměřice was compared with the results of local probes in southern Bohemia, on the estate Stahlavý, in Usti nad Labem and in the cities of Frydek and Mistek. Comparator sites were chosen to represent different areas as well as geographically close or distant cities. Results of comparison confirmed the different demographic developments in urban and rural areas and showed the influence of geographical distance of each city.

**Keywords:** development of natural change, 18th century, Litoměřice, the population estimates
