Abstract

This bachelor thesis deals with the use of educational portals available on the Internet. The work focuses on the reasons for the use of educational portals from the perspective of their users and the reasons for the establishment of the views of their founders. Furthermore, the work is also devoted to the description of this type of non-formal education, which is carried out with the help of information and communication technologies. It also addresses the issue of supply and demand in relation to education and educational inequalities. All the findings are based on the expert interviews with the providers of these educational portals and on the online questionnaire with the users of the selected educational portals
