

Abstract

The main aim of the thesis was to evaluate the development of the cultural landscape of Podmoklansko (region) in the river basin of the Cerhovka. The area concerned was analyzed using the old maps, as well as aerial and satellite pictures of the area. The changes in various categories of land use were also evaluated. The ecological stability was quantitatively expressed by the coefficient of ecological stability. The development of the cultural landscape of Podmoklansko region was also compared with the general evolution of the Czech landscape since the 18th century. Based on field research, the ecological, eco-aesthetic and sacred function of the landscape was described.
