

Abstract

This work contains a research on the class amphibia and evaluate the relationship between man and amphibians (morphology, physiology, biology, etology, bioindiation, threat and conservation of amphibians, myths, toxikology etc.). Amphibians are analyzed as a model group with respect of using them in educational praxis (model group of animals in education of biology, zoology, ecology, etology, nature protection, literature etc.). Exotic species are choosed as examples, which are best for care in schools. Here are made also manuals for breeding of selected less demanding species in aquarium or aqua-terrarium conditions and for observing their life histories.
