

## **Abstract:**

Risky sexual behavior is a phenomenon which can have a negative impact on physical, psychic and social aspects of young girls' lives. This paper is focused on some specific issues of the voluntary premature sexual intercourse of girls before and after the age of 15. Listed are mainly psychological aspects of this phenomenon but also legal regulations relating to early sexual activities of adolescents. The paper deals with the main factors that contribute to the desire for early sexual experiences, further with potential consequences of this behavior and with the importance of prevention of this type of risky sexual conduct. In the empirical part of this work, a qualitative research is proposed which focuses on psychological aspects affecting decision-making of girls with different sexual experience as well as on subjective assessment of their conduct. Furthermore, the research proposal deals with the issue of risk behavior. In addition, in subsequent interviews the tendency for drug abuse will be examined.
