

Abstract

This bachelor thesis is a czech annotated translation of a part of a french popular science publication *L'enfant qui n'entend pas*, written by two women who worked in the Necker Hospital in Paris – Dominique Seban-Lefebvre and Christine Toffin, The translated text is devoted firstly to the genetical tests which can show the reason of the deafness of the child and secondly to the cochlear implant, device that makes the hearing possible even for the children with severe hearing loss. The second part of this thesis is a theoretical one that describes the important translation difficulties, shows the methods that were used and mentions the effects that it had on the translation.
