

Abstract

The aim of the thesis is to gather data for the creation of information literacy standards for graduates of 9th grade of elementary school in the Czech Republic. The theoretical part contains the definition of information literacy, organizations in the field of information literacy, documents in the information society, as well as existing standards of information literacy in the Czech Republic and abroad. Finally, research activities in the field of information literacy in the Czech Republic are described. In the practical part, the analysis of the current situation in the information literacy development in the UK and Sweden is introduced. The analysis of the curricula of selected elementary and grammar schools in Benešov distrikt is described as well. The main contribution of this thesis is the analysis of the selected schools and a proposal of the information literacy standards.
