

Goal of this thesis is to design and implement an information system allowing amateur sport clubs and clubs participating in lower sport competitions to easily administrate their content, log club events, players, statistics and use a photo-gallery all in one place. This thesis also puts emphasis on easy future extensibility and on its user's security. To achieve these goals, the system uses freely available technologies – PHP, MySQL, Apache, Nette Framework and others. The application provides its functionality with respect to the level of privileges assigned to the user role as referee, coach, player or administrator.
