

## **Abstract**

**Title:** Analysis of the badminton match in women's singles

**Objectives:** The goal is to identify the most suitable choice a combinations of the first three shots, leading to the acquisition point between the server and the receiver among the best world woman players. And also to discover which was the usage of different types of serve, return and the third shot.

**Methods:** Indirect analysis – videoanalysis

**Results:** The results has shown that women prefer short forehand serve, most of the returns went into the front of the court, than most used shot was lob which tended into rear backhand court. The most played shot was lob into rear backhand court, which is interesting. Still woman players were more successful with the short shots at the net.
