

Posudek na diplomovou práci	
<input checked="" type="checkbox"/> Posudek školitele	Jméno školitele: RNDr. Michal Hála, Ph.D.
	Datum: 24.5.2016
Autor: Bc. Klára Aldorfová	
Název práce: Characterization of the exocyst complex SEC15 subunit in <i>A. thaliana</i> Charakterizace podjednotky SEC15 poutacího komplexu exocyst u <i>A. thaliana</i>	
Zařazení předkládané práce do kontextu dalších prací týmu Klára joined the project that falls into the scope of interest of our group- the tethering complex exocyst and also connects it with other main topic - RAB GTPases. She quickly learned all the methods used in our lab. She did not need to establish quite new methods but turned out to be fully capable of fitting the established methods to demands of the project. Her work also contributed to the grant project supported by the Grant Agency of the Czech Republic. We also count that the results will be soon published in a scientific journal.	
Přístup studenta k zadanému tématu It was really pleasure to supervise Klára as she showed to be really keen on the topic, read relevant literature and was always able to discuss different aspects of her project. She also brought in her own ideas, now implemented in her thesis.	
Postup práce The work went on fast and Klára's effort overcame also a delay caused by her participation in the Erasmus program resulting in half-year stay in dr. Peter Nick lab in Karlsruhe. Klára always followed given deadlines either in the labwork as well as in writing the thesis.	
I cordially do recommend her thesis for acceptance.	
Celkové hodnocení: výborně
