

Abstract

Title	Positioning of patients in hippotherapy
Goals	The goal of my thesis was mapping and analysing positions and rules which are mostly used in hippotherapy, in which is used healthful effect of three dimensional motion of horses back. The target group are centers of rehabilitation, which are using hippotherapy under The Czech Hippotherapy Company, actively.
Method	Thesis is consisted of two sections. The first is consisted of data collection from czech and abroads literature, and in the second section is consisted of questionnaire filled by hippotherapy centers.
Results	The thesis deals with description of hipporehabilitation and evaluation of questionnaire. The hippotherapy is a subsection of hipporehabilitation, which is using three dimensional motion of horses back. The main part of using hippotherapy is professional team and a horse. Every patient, who enters this therapy is individual, and by this is cared for him. It is necessary to choose the right positions and use another positions of patient. The results of questionnaire shows how important the graded therapist is. On the therapist depends the process of treatment and completion of the therapy due to another diseases of patients.
Keywords	Position, patient, hippotherapy, horse, three-dimensional movement, therapeutic riding
