

ABSTRACT

The purpose of my thesis is to analyse the conditions adjusted in main conceptions and in the legislation of waste management for accomplishing the goals of waste hierarchy. I point out some of the weaknesses of the waste hierarchy itself and the relevant legislation as well. The emphasis is on some aspects of different means of recovery of waste which is the priority in terms of waste management nowadays. I describe the differences between the individual ways of waste management and at the same time I describe the links throughout the whole waste hierarchy. Within partial summaries and especially in the conclusion I attempt to outline the ideal regulation on the waste management in The Czech Republic for next short and long term period so it matches the requirements of EU legislation.
