Main aim of this thesis is analysis of availability of informational resources and services in the field of environment in the Czech Republic. In the first chapter a brief characterization of the field of environment is provided. Following chapter briefly defines typical users of information about the environment. Next chapters are devoted to a classification and an overview of selected informational resources (both electronic and printed) and also to an overview of mostly Czech institutions providing informational support for the field of environment (especially universities, research institutions and government organizations). The thesis also includes a research part focusing on analysis of the resource availability at selected institutions in Brno, which is supplemented with graphs and tables.
