**ABSTRAKT**

Thesis begins with theoretical part which defines old age and its aspects. Fluently continues to chapter discussing changes in the old age into adaptation process in The House V Podzámčí. The thesis focus on seniors whose got to new life situation which needs to be handled. One of the chapters is going closer to changes in the old age which can be connected to adaptation process in the facility. The goal of this connected part, which is conceived as a questionnaire, is to establish level of satisfaction with the adaptation process and position of adaptation worker from the view of the remaining workers whose are working with individual schedules. Research arises connecting theoretical part in which are recorded experiences from practices and part where is applied questionnaires results.
