

Title:

Comparison of Employment opportunities for graduates of Physical Education and Sports Programs in the job market of the Czech Republic

Objective: Our study explored the differences in employment opportunities for graduates of specific faculties. Our aim was to compare employment opportunities of graduates from pedagogical and physical education faculties investigated from various points of view.

Methods: Grant GACR 406/052670 provided for the sending of 4330 questionnaires (DSTVS) with 17 questions and 1855 were returned answered. We compared study data to create an analysis of Employment opportunities for graduates of Physical Education (PE) and Sports Programs from pedagogical and physical education faculties.

Conclusions: The Results confirmed our working hypothesis to a great extent. Analysis showed that the majority of graduates work in schools (55,1 %), and the next largest group are outside the physical education field (28,4 %). A majority of them are satisfied in their chosen profession. They have a predominantly positive view of their PE studies.
