

Abstract

The goal of this work is to create overview of the zoo clubs in the Carlsbad region. The clubs with their existence and activity contribute to enhance and consolidate curriculum within each output not only in Biology but also in environmental education.

In the first part of this work there are summarized data dedicated to the history of the zoo clubs in the Czech Republic. I deal with their distribution according to the criterias given and present status of the zoo clubs within free time activities. The special attention is dedicated to the history of the extinct zoo clubs in the Carlsbad region, to the plans of their future arrangements and recovery in this region, mainly future construction of the zoo.

The second part deals with each zoo club in detail.

In the last part I deal with animal species, their acquisition and adoption. There are information about extracurricular activities in each institution, like lectures, clubs and camps.

Web pages are the integral part of each zoo club because they often inform about present and future activities within extracurricular activities.

Key words

Zoo clubs , extracurricular activities, Biology, environmental education
