

ABSTRACT

The bachelor thesis dealing with the history of the most important factory in Chrudim - factory of Mr. František Wiesner - during the 30' of the 20th century. This thesis contains three sections and is focused mainly on management and challenges of this Engineering plant and Foundry during this period. The first part covers the changes in the management level of the company and also describes changes in relations between company and Chrudim city. The second part focuses on the daily operations of the factory and production process with regard to the impact of the economic crisis in Czechoslovakia and political situation in the second half of the 30'. The thesis of course does not neglect the employment aspects of this company, which is in depth described in the last part.
