

ABSTRACT

The diploma thesis deals with the speech therapy of people after stroke. The aim of this diploma thesis is the analysis of the communication abilities of people after stroke. On the basis of this analysis was created for two person therapeutic material, which was verified during speech therapy. The diploma thesis is divided into two parts. The theoretical part of the thesis analyses the issue of stroke and neurogenic communication disorders on the basis of the current state of knowledge. The practical part of the thesis is performed with qualitatively focused research with the use of case studies, observation and creating own therapeutic material. Case studies describe speech therapy and work with material. The research shows that the therapeutic material is usable in practice.
