

Practical Forms of the Teaching in the Preparatory Education of the Science and Biology Teachers (with a View to Microbiology)

Presented thesis deals with the practical forms of education used in the practice teaching of the science and biology teachers. Especially the problem of the reflection in this process has been solved, namely in its practical components. Particularly has been focused on one special subject - microbiology.

The main object of the thesis consists in a proposal how to innovate the present content of the practical part of a Microbiology Course, which should serve to the education of the students with the specification " Teaching Biology in Primary and Secondary Schools " at Faculty of Education at Charles University in Prague, resp. to the education in its bachelor's part of the structural studies (which are being prepared).
