Keywords: Quality of life, Parkinson's disease, WHOQOL-BREF, SF-36, nursing care, rehabilitation, palliative care

This thesis deals with the quality of life of patients with Parkinson's disease. The theoretical part explains concepts such as quality of life, well-being and happiness. Attention was paid to the methods of measurement and evaluation of quality of life. They have been described stage Parkinson's disease and its clinical manifestations, treatment - pharmacological, biological and neurosurgical and complications. He stressed the importance of rehabilitation for patients affected by this disease and the need for palliative care. Attention was paid to the specific individual nursing care for these patients.

In the empirical part was used a quantitative research approach using two generic quality of life questionnaires WHQOL-BREF and SF-36th The main objective of the research was to assess the quality of life of patients with Parkinson's disease. Compare domains of quality of life of patients with Parkinson's disease not only healthy population, but also with research from previous years on the same topic. Find out, if the quality of life of patients with Parkinson's disease conditional selected variables.
