

Abstract

The diploma thesis “*Comparing Climate Change Adaptation Measures: The Cases of the Czech Republic, Germany and Poland*” compares national adaptation strategies on climate change of the Czech Republic, Germany and Poland. These strategies represents general politics of selected states on the field of climate change adaptation and the author compares them regarding the adaptation measures they contain. For this comparison, framework based on options and recommendations provided by Intergovernmental Panel on Climate Change (IPCC) and the EU is used. Author also analyses mitigation policies of selected states and examines similarities and differences in both approaches. In conclusion author relates his findings towards existing research and using both, he introduces limited theoretical findings about possible relationship between mitigation and adaptation policies of states.
