Abstrakt:

The first part of this bachelor thesis presents a brief overview of perseveration and its various manifestations. The second part presents findings about posttraumatic stress disorder, its protective and risk factors, diagnosis and treatment. The third part is devoted to the research of connection amongst these phenomena. The empirical part presents a proposal of research, which aims to test the perseveration as a factor of posttraumatic stress disorder. Probands of this research are members of the Army of the Czech Republic, heading to a foreign military mission. The purpose of this research is to find another criterion for the selection of people who are at risk of traumatic events in their profession and to contribute to the prevention and treatment of posttraumatic stress disorder.
