ABSTRACT:

The thesis is focused on children behavioural problems at secondary schools in the context of Czech education system. The thesis aim is to find out about education, upbringing and integration process of these troubled children. In the theoretic part it will be explained the terms – behavioural problem and its most frequent symptoms at secondary school, a troubled pupil, types of secondary schools, that will be related to this work and causes of behavioural problem at this age.

The empirical part will be realized by conversations at five different secondary schools in the Czech Republic. It will be used the method of quality. The conversations will be taken place with methodists of prevention, psychologists or teachers of the troubled pupils. The empirical part will be implemented with the aid of qualitative interviewing -semi-structured interview. The interview will be taped and written down. Afterwards I will make interwees answers necessary for survey.
