

## **Abstract**

The focus of this thesis is on the influence of sibling constellation on human sexuality. It concentrates especially on the influence of the birth order on sexual strategy, mate choice, sexual orientation and sexual onset of adolescents. It contains a comprehensive overview of the studies that have been carried out in this field, including the general trends and their possible causes. At the same time, it highlights the lack of attention to the insufficiently explored areas that should be explored in the future. The introductory chapters also provide a brief summary of the findings of sibling constellations and human sexuality.
