

Abstract in English

The aim of this bachelor thesis is to map electronic information sources for physiotherapy. The first part defines the term physiotherapy, especially with relation to undergraduate study programs in this field. The next part describes, evaluates and compares selected electronic sources. The key to choosing the described electronic resources were the recommendations of professional associations from various parts of the world, and the Czech Republic and information from articles dealing with this issue published in professional journals.

In the practical part is subsequently verified availability of these resources in the Czech Republic. Based on the study and the outcomes of the practical part, the information support of physiotherapy in the Czech Republic in terms of electronic information resources is critically inspected. The availability of resources for the undergraduate training of physiotherapy students, and physiotherapists working in practice in the Czech Republic is assessed.
