

Motional spare time activities in the Gipsy youth lifestyle

Aim:

The aim of our research is to compare the different age categories at selected Schools anthropometric differences between Roma boys and girls. Furthermore, to determine the relationship

to physical leisure activities, thus contributing to an objective view on Roma

Youth and its position in the majority society. We consider it appropriate to analyze the different features motion leisure activities in the lifestyle of Roma children and youth.

results:

Results illuminates the method of comparison and analysis of polling in each year are

In conclusion confirm the differences of interest and lack of interest in physical leisure activities in lifestyle

between Roma girls and boys. The views of young Roma generation for motion

leisure activities in lifestyle Roma and Roma families. Furthermore, we evaluated

anthropometric values respondents, where it is evident that with increasing age, all

data and increase at Roma boys and girls from 8 classes begin to vary significantly. It could be

say that our research has disproved the universally valid opinion when he says that thanks to the Indian origin

Roma are smaller and lighter than the Czechs. This is due to the fact that in man, as in

each species, occurring type diversity (variability), it means that no

Human population is not uniform type.
