

Abstract

Bergson's *Matter and Memory* presents original conception of perception which is developed on the grounds of dualistic ontology. So, Bergson's solution to mind-body problem is not an attempt to explain it as an isolated phenomenon, it is rather ambitious project which puts perception into world where the order of perception and the order of mathematical science coexist. In this dissertation, I will try to determine methods which govern solutions to problems of *Matter and Memory*. I will also deal with *Time and Free Will* in outline.
