

Summary

Title of thesis

Rehabilitation of Children with Combined Disorders

The aim of work

The aim of my thesis is to process the problematic of a complete rehabilitation of children with combined disorders, to describe my own experience and knowledge and to substantiate them by an elaborated case study of a child, monitored in the course of four years, together with the description of services provided by Demosthenes – Ústí centre of complex care.

Methodology Method

The thesis is solved as a case study. Anamnesis data collection about the child, interviews with parents, care of the child, diagnostics and therapy were monitored and carried out in the course of four years, from the age of 4 to the age of 7,5 of the child.

Results

The long-lasting monitoring of the handicapped child confirmed the importance of the complexity for the rehabilitation of children with combined disorders. Only on the basis of a close cooperation of a multiprofessional team and child's parents, it is possible to achieve an improvement in the clinical state, to support psychomotoric development of a person and to enable the child to experience the best situation for an entrance to their further life. The services of a complex rehabilitation provided by Demosthenes – the centre of complex care, fulfill this prerequisite.

Key words
