Abstrakt v anglickém jazyce

This thesis analyses the ability to write by a nondominant limb in adult population. First three (theoretical) chapters introduce the issue of communication, aphasia, laterality and writing skills. The fourth chapter brings the research which was realized with a group of intact people. The research compares the results of the test written by dominant and nondominant limb. The aim of this diploma thesis is the contribution to a validity verification of testing writing skills by a nondominant limb
