Abstract

Title: Analysis of the observance of the objectives of school physical education at primary school graduates.

Objectives: The main purpose of this work was to analyze the knowledges, skills and level of physical abilities and attitudes of the 9th year of primary school graduates pursuant to the proposed standards for physical education developed according to the modified RVP ZV.

Methods: To collect and successive evaluation of the data was used a questionnaire survey. A total of one hundred and forty students were interviewed, where seventy students were from Písek and seventy students from České Budějovice. Further, their physical education teachers were interviewed.

Results: The results of the analysis don't correspond to the expectation that the students have sufficient knowledge of the activities influencing their health and physical education skills. Students don't have sufficient (general) theoretical knowledge from this sphere.

Keywords: Education standards, basic education, educational framework programs, physical education, movement literacy, student competenc.
