

Abstract

Name: Case study of physiotherapy treatment of a patient with the diagnosis of multiple sclerosis

Summary: Bachelor thesis deals with the topic of multiple sclerosis, when the main aim of this work is to precisely introduce and reveal the run of this disease. The theoretical part consists of the definition of the disease, specifics of etiology, symptoms, run and possible treatments. Single treatment methods are aimed on patient's perception of his/her body or single stimulations with his/her own senses. The inseparable part of the therapy is the mental condition of the patient. The practical part considers case report of patient L. S. involving incoming assessment, description of chosen single therapies, out coming assessment, evaluation of the treatment at the end of the therapy and conclusion. The undividable part of the work is the proposal of long and short-term plan of therapy.

Key words: multiple sclerosis, physiotherapy, rehabilitation, relapse, remission, paresis, myelin
