ABSTRACT
The diploma thesis called „Aids in speech therapy of dyslalia“ consists of a theoretical and a practical part. The theoretical part is devoted to the general concept of logopedic intervention, dyslalia and all components of logopedic intervention in this impaired communication ability. There is also described the classification of speech aids according to various authors and some selected aids. Views on their use can be different even among the experts. These aids are also included to the practical part, which, through a questionnaire survey, examined the views of clinical logopedists on these aids and their use. Research provides an overview of the use of these aids in the practice of respondents and shows that their view on them varies in some areas.

KEYWORDS
Dyslalia, clinical speech therapist, impaired communication ability, speech aid, speech therapy.
