Year of defense: 2018

Keywords: multiple sclerosis, quality of life, immobility, social institute,
Domov svatého Josefa, life with disease, the impact of the
disease on everyday life

The bachelor thesis deals with the quality of life of persons with multiple sclerosis, solving the problems of everyday life in terms of subjective experience of patients with this disease. The thesis is divided into the theoretical and empirical part. The theoretical part describes the history, pathophysiology, occurrence, course, diagnosis and treatment of the disease. Another title is the nursing aspect pointing to patient care and the possibilities of social institutions. The quality of life, which is also described in the first part of this thesis, is not neglected and is the main topic. The empirical part was led by mixed research. When was used for qualitative method of semi-structured interview and for quantitative method PTGI questionnaire, which points to posttraumatic development in patients. The research was carried out at the workplace of Domov sv. Josefa v Žirči. The result of the whole work is big individual differences in the experience of life.
