

Abstract

This thesis describes bibliometric indicators and bibliometric methods and presents their potential practical application on the analysis of the Czech scientific journal *Czechoslovak Psychology*. The introduction provides a historical development of bibliometry, a scientific classification of bibliometry and presents some of the main thinkers in the field. The thesis then continues with the exploration of bibliographic methods and laws and sets them into wider context with the issue of current evaluation of scientific journals and the issue of the scientific work itself. The research deals with the scientific journal *Czechoslovak Psychology* and the subject of psychology is briefly presented to the reader. The practical part of the research focuses on the use of bibliometric methods in the qualitative analysis of data from Web of Science and Scopus citation databases, these registers are compared with each other. The conclusion presents the results from this bibliometric analysis and suggests recommendations for further bibliometric research.
