

Abstract

The Negrelli viaduct in Prag

The subject of this thesis is one of the most important bridge constructions in Prague, a railway viaduct called by its creator Negrelli viaduct. It's goal is to put Negrelli Viaduct into the context of the time it was created and to incorporate it into the development of the Prague bridge architecture, thus comparing the technical nature of these engineering structures. The analysis of the viaduct construction emphasizes its history, an analysis of the current reconstruction, especially from the point of view of architectural solutions and heritage care. The end of the thesis is devoted to the tendencies of the present time of the formation of the public space within the viaduct itself.
