

ABSTRACT

This bachelor thesis focuses on the problems of Crohn's disease and its treatment with exclusive enteral nutrition in childhood. The thesis is divided into two parts – theoretical and practical. The basic facts about epidemiology, etiopathogenesis, symptoms, diagnostics, diet, treatment and the specifics of Crohn's disease in childhood are given in the theoretical part. The practical part looks at the five casuistries of children suffering from Crohn's disease and treated with exclusive enteral nutrition. The goal of this work was to compare the information from literature and furthermore evaluate the health conditions before and after the treatment.
