

## **ABSTRACT**

In my thesis I deal with the specifics of social work with clients with hearing defects.

The purpose of my work was to find out what experiences the students of Czech schools have with people with hearing impairments and how they orient themselves in this issue. This thesis is divided into two main parts: Theoretical and Practical. The theoretical part of my work is divided into twelve chapters, which are focused on surdopaedia, hearing impairment, diagnostics, hearing screening, education and last but not least communication, compensatory aids and specifics of social work.

In the practical part I used the questionnaire to find out basic information from students from the Hussite Theological Faculty. I was wondering if there are students at the faculty who are interested in this issue and whether they would like to work with people with hearing impairment in the future.
