

## **Abstract**

This bachelor thesis is dedicated to data data boxes, their development throughout the time, their significance and legal definition. The theoretical part of my thesis is focused on the impact of data data boxes on the legislative framework in the Czech Republic, and it covers the development of eGovernment in the Czech Republic where data data boxes are considered as one of the eGovernment priorities.

In my research I am using questionnaire methodology in which I have focused on the longterm stowage and usage of data boxes by public archives.

This part of my study is dedicated to the objective and practical use of data boxes in the system.

The thesis is based on current and relevant scientific sources, titles and legal policies.

***Key words:*** *data message, data box, eGovernment, Czechpoint, electronic document, digital signature, trusted timestamping, electronic seal*
