

Supervisor's review of the bachelor thesis

Student: Belinda Hlomayi

Title: Case Study of Physiotherapy Treatment of a Patient after Total Knee Replacement

Supervisor: Doc. PaedDr. Dagmar Pavlů, CSc.

The presented work on the topic of „*Case Study of Physiotherapy Treatment of a Patient after Total Knee Replacement*“ contains 88 pages of text, 78 sources, the work is supplemented by 4 appendices.

The work has a standard structure – 5 chapters - which is in accordance with the rules for bachelor theses, and is divided into 2 basic parts - theoretical and practical.

The main content of the work is the presentation of the patient's case report - a 57-year-old man after total knee replacement.

The theoretical part of the work is very extensive, it is processed with a large number of literary sources and contains all important topics related to the practical part.

The practical part of the work, which the student worked on during a continuous clinical practice, contains the initial examination of the patient, the proposal of therapy, its implementation and the final examination, as well as evaluation of the effect of therapy. The practical part is elaborated carefully, all diagnostic and therapeutic procedures applied by the student are appropriate to the patient's condition and diagnosis. Each therapy session is also described very carefully, clearly.

By elaborating the theoretical part, the student demonstrated a very good ability to work with literary sources and by elaborating the practical part, the student proved to apply well the skills acquired by studying in practice.

The formal side of the work is good, the thesis is written in very good English.

I have no comments on the student's work - cooperation, as well as on consultations during the implementation of the work. Likewise, I have no further comments on the entire bachelor's thesis.

I can also declare, that after studying the work, I found that all sources in the bibliography are properly cited or paraphrased in whole thesis

Conclusion

The submitted thesis corresponds to the requirements for bachelor thesis at the Charles University FTVS. I therefore **recommend** to the commission for state exams to accept the bachelor thesis of Belinda Hlomyi to the defense and I suggest a grade of **excellent**

Defense question: Which phase of therapy - working with the patient was the most difficult for you, and why.
