

Abstract

The main task of the bachelor thesis is overall evaluation of the early medieval burial ground in Praha-Vinoř, “V Žabokřiku”. The rescue archaeological research there carried out in 2008 and 2009 and was led by Mgr. Lubomír Andříšek. The burial ground has 24 graves and it is dated on the basis of the burial assessment from the end of the 9th century to the first half of the 10th century. The bachelor thesis was elaborated on the base of the carefully processed finding report by Mgr. Jiří Unger, PhD. and expert opinions (geological and anthropological) and analyses (anthracological, xylotomic and macro-residual), which contribute to the social structure of the community buried in this burial ground.

Key words:

archaeology – Praha-Vinoř – middle ages – burial ground – grave goods – social structure
