

Téma diplomové práce	Pharmacological aspects of the treatment of diabetes mellitus
Jméno studenta, studentky	Ampatzis Konstantinos
Jméno vedoucího diplomové práce	Prof.MUDr.Zdeněk Fendrich,CSc.

I. Posudek vedoucího diplomové práce

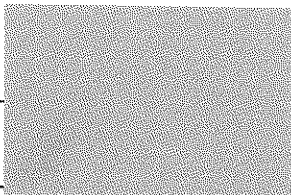

Mr.Ampatzis was accepted as a student for a preparation of his Diploma Thesis to the Department of Pharmacology and Toxicology in 2005. First he has worked under a supervision of Dr.Čečková, later when Dr.Čečková left the Department for her mather hollidey he was passed to Prof.Višňovský but because his sickness he was finaly (i.e. in September 2007) passed to me.

I appreciate that Mr.Ampatzis worked on hid diploma work all of himself and that he finished his diploma Thesis in the acceptable time. His worked is based on the recent knowledge about pharmacological aspects and therapy of Diabetes Mellitus.

Therefore I can give him my reccomendation that his work has all conditions as a full diploma thesis.

Navrhovaná klasifikace **very good**
