

## **Abstract**

Theoretical part of this bachelor thesis is focused on psychedelics substances and its effects. It focuses on the context of psychedelics experience and its relationship to psychedelics fenomenology specifically its course, quality, intensity and longterm changes in bahavior and experiencing. It focuses in more detail on mystical experience during pychedelic experience. This thesis also focuses on particular attitudes toward death, their meaning for an individual and his life. This Thesis present summary of factors which are related to specific attitude toward death and which may be ralated to specific fenomenology during psychedelic experience.

Aim of this thesis is to find out if there is a relationship between psychedelic experience and attitude toward death. Design of this kvantitative research is focused on psychedelic users with psychedelic experience. Research uses Mystical Experience Questionnaire (MEQ), Challenging Experience Questionnaire (CEQ) and Death Attitude Profile – Revised (DAP-R) to fing out what psychedelic experience was experienced in uncotrolled kontekst by non-clinical psychedelic users and tries to put this experience in a relationship with a attitude toward death. Research problem si focused on a connetcion between mystical experience induced by a psychedelic substance its demension, intensity and attitude toward death. And a connection between challenging experience induced by a psychedelic substance, its dimension, intensity and attidue toward death. The outcome of this research could help with destigmatizations of psychedelic substances and its effects on non-clinical population. The result will also be used for formulation further hypothesis.
