

This work presents and summarizes results of comparison of well and cesspit excavated by research of house čp. 837/II. Methodical framework will be created for elaboration of other objects on the plot. Site report written by PhDr. Václav Huml, CSc. will be undergo review thanks to systematic elaboration of data of different origin. Corelation of his documentation and report will allow comparation with results of others researches. Review of the site report will be background for creation of theoretical framework of waste strategies problematics. With this review will be work set in broad context of knowledge of this problematics and local Prague problematics of elaborating data from objects form by waste strategies processes (primarily wells and cesspits). Last but not least there will be demonstrated benefits of interdisciplinary cooperation thanks to review of pollen analyses made by RNDr. Vlasty Jankovské, CSc.
