

ABSTRACT

This diploma thesis is focused on education specifics of children with a rare disease at a special primary school. In the theoretical part, the author describes three specific rare diseases – mucopolysaccharidosis, Prader-Willi syndrome and Smith-Magenis syndrome. Deals with the manifestations of the disease, treatment options and the arrangement of the education for these children. In the practical part the author inquires how teachers work with a child with a rare disease during the day at special primary school. The thesis also inquires what specifics the educational process brings to teachers and where do the teachers find the sources for their methods of work.
