

## **Abstract**

### **Title:**

Physiotherapeutic care for patient with nervus facialis paralysis case study

### **Objectives:**

The goal of this thesis is to establish theoretical basis related to the given problem, recording of related therapeutic sessions, initial and final kinesiological analysis and evaluation of therapeutic results for the case recorded.

### **Methods:**

We look up relevant theoretical work related to facial nerves and muscles. We summarize known methods of approaching the problem. Practical section describes general cause peripheral paralysis of nervus facialis case study. There is an initial kinesiological analysis in this section, short term as well as a long term physiotherapeutic plan and recording of ten sessions with the patient along with final kinesiological analysis.

### **Keywords:**

Periferal paralysis, Bells polio, nervus facialis, facial nerve, mimic muscles, sister Kenna method, soft tissue techniques, case study, physiotherapy
