

## **Abstract**

The bachelor's thesis *Book covers: the project description and its perspectives* deals with the description of the project from its beginning up to the present. We especially emphasize the Research Library of South Bohemia, which is together with the Moravian Library, the administrator of the whole project. The main goal of this thesis is to describe in detail the whole project *Book covers* and closely capture its development. The introductory theoretical part sums up the project history as well as the description of the integration of the Research Library of South Bohemia into the project. Other chapters deal with current development of *Book covers* and we briefly mention the very scanning and subsequent processing of covers, title pages and contents illustrated by the example of the Research Library of South Bohemia. The bachelor's thesis also contains a practical part which introduces the methodology and setup of the research. The analysis was realized by the qualitative methodology, using semi structured dialogues. The summary contains compilation and evaluation of the gathered facts
