

Abstract

Title: *Handball education on primary schools and its dependence on quantity of members in chosen regions of the Czech Republic.*

Aims: This thesis is specialized on study of relations between quantity of members and extension of handball education at schools in chosen regions of the Czech Republic. It is focused on possibilities of usage and development of relations between these two factors. The main aim is to try to clear up causes of decline of the member base and to suggest possibilities how to reverse this negative trend. The part of the thesis is also comparison between age structure of member base and age structure of population in chosen regions of the Czech Republic.

Methods: In this thesis is used empirically – analytical research method. A data collection was carried out by questioning – questionnaires. Obtained data were analyzed by quantitative method.

Outcomes: It was found out by the research that a member base in handball decrease. There are no relation between age structure of member base and age structure of population in chosen regions of the Czech Republic. Hypothesis that on a quantity of members has substantial influence a submission of handball into the school physical education was disproved. The end of this thesis includes some recommendations for enlargement of handball in the Czech Republic from results of the research.

Keywords: handball, school physical education, member base
